

## EBV Sees Future of Autonomous Mobility for Land, Sea and Air

### Terms:

Whether it's self-driving cars and trucks or unmanned aircraft and deep-sea vessels, the vision of autonomous vehicles is quickly becoming a reality thanks to new sensor technologies, networking possibilities and self-learning algorithms. The latest issue of [The Quintessence Magazine](#) <sup>(1)</sup> from [EBV Elektronik](#) <sup>(2)</sup> explores this emerging new multi-billion dollar business model and shares insights from EBV Vertical Segment Manager Automotive, Europe, Frank-Steffen Russ on the role EBV's extensive ecosystem of hardware, software, design support and production services partners can play in the evolution of autonomous vehicles for land, sea and air.
