

Element14 Invites Community Members to RoadTest New Tech

Terms:

Reviewers get free product in exchange for feedback

Element14's RoadTest product review program gives community members the opportunity to get and test drive select new products free of charge. The program is designed to give community members objective insight into the pros and cons of new technologies by leveraging the real world experience of fellow designers.

Each month, Element14 community members are given the opportunity to apply for a new RoadTest project. Those chosen, will receive the designated product at no cost, on the condition that they provide a detailed analysis of their product test and evaluation in order to reveal insights for other community members into the technical operation, programming, ease of use, quality and performance of the product.

Enrollment is now open for current RoadTest projects including: [E36313A Triple Output DC P.S.](#) [1], [Cypress PSoC® 6 BLE Pioneer Kit \(CY8CKIT-062-BLE\)](#) [2] and [iMOTION Motor Drive Design Kit](#) [3].

To learn more and apply for a RoadTest, visit [the RoadTest page.](#) [4]
