

Avnet Helps Customers Shift Gears with New Automotive Solutions Guide

Terms:

For years, the automotive and transportation industries were driven by how much power you could get out of a vehicle, and then it was how much fuel efficiency you could achieve. Today, consumers are demanding a transportation experience that includes: keeping the price down, the size efficient, with state-of-the-art connectivity and optimization, all built on non-traditional power sources at a higher degree of integration.

Avnet's [Automotive Segment Supply and Design Chain Support Ecosystem](#) [1] can provide customers with a full portfolio of automotive grade devices and solutions, including engineering design services, software expertise and manufacturing capabilities geared specifically for the automotive segment and key transportation applications.
