

5 Creators Show that there is Power in Numbers in Avnet's Communities

Terms:

Avnet brought together the largest engineering communities in the world, **Hackster.io** and **element14**, to provide a forum for collaboration. To demonstrate how those communities have helped creators vet ideas and invent the latest innovations, we asked...and they told us!

Via a recent social media contest, we asked community members to share how Hackster or element14 helped them **#ReachFurther**. We got comments from all over the world like: *"When I have questions, I put them on the element14 community and there is undoubtedly someone who has an answer"* to *"I am happy to be a part of 1 million Avnet community members, which connects all the like-minded people from all over the world."*

From the many entries received, we selected five winners and below are their projects. Congratulations!

Varadaraju's Magic Gloves - With the help of the Hackster community, Varadaraju created a sign language translation machine.

Oliver's Particulater - Using Hackster's rich expertise, Oliver's particulater easily measures air quality to improve the health of a community and avoid pollution.

Marcel's Projects - Not just one project, Marcel has created a variety of projects from an infinity mirror to a person recognizer and object detection—all with the help of Hackster.io.

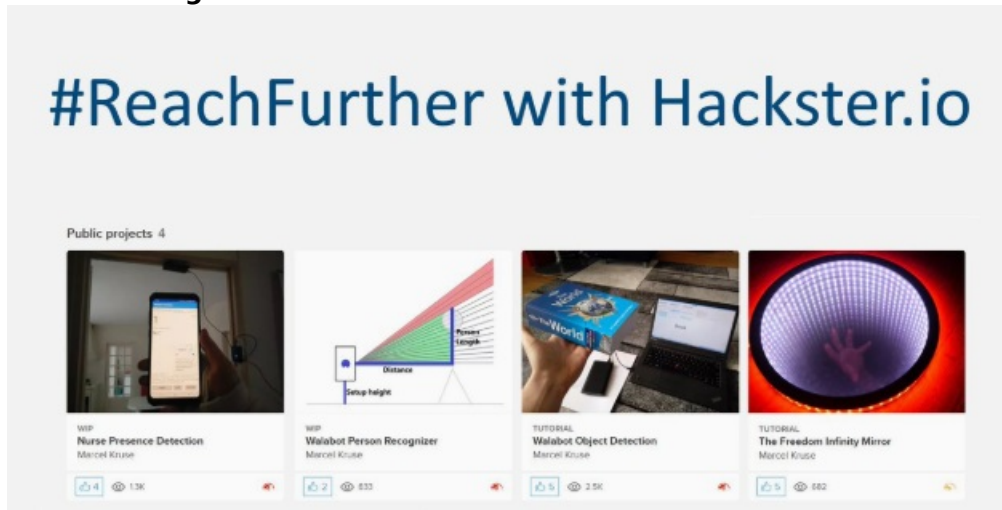

Lahcen's Lego Sorter - Harnessing element14's wide variety of expertise, Lahcen utilized the software expertise in the community to help bring his Lego sorting hardware to life.

Arnab's Quadruped Robot - Arnab leveraged the community to help him get his quadruped robot from "in his head" to built and on the street.

[Learn more](#) [1] about how this world-class dynamic-duo community provides creators with the resources they need to bring their ideas to life and reach further.
