Advancing the Future of Energy
WITH CAPITAL DISCIPLINE, INNOVATION AND UNMATCHED EXECUTION
RELIABLE | AFFORDABLE | SUSTAINABLE ENERGY
Cautionary Statement

This presentation contains forward-looking statements made by Valero Energy Corporation (“VLO” or “Valero”) within the meaning of federal securities laws. These statements discuss future expectations, contain projections of results of operations or of financial condition or state other forward-looking information. You can identify forward-looking statements by words such as “believe,” “estimate,” “expect,” “forecast,” “could,” “may,” “will,” “targeting,” or other similar expressions that convey the uncertainty of future events or outcomes. These forward-looking statements are not guarantees of future performance and are subject to risks, uncertainties and other factors, some of which are beyond the control of Valero and are difficult to predict including, but not limited to, the effect, impact, potential duration or other implications of the COVID-19 pandemic. These statements are often based upon various assumptions, many of which are based, in turn, upon further assumptions, including examination of historical operating trends made by the management of Valero. Although Valero believes that the assumptions were reasonable when made, because assumptions are inherently subject to significant uncertainties and contingencies, which are difficult or impossible to predict and are beyond its control, Valero cannot give assurance that it will achieve or accomplish its expectations, beliefs or intentions. When considering these forward-looking statements, you should keep in mind the risk factors and other cautionary statements contained in Valero’s filings with the Securities and Exchange Commission, including Valero’s annual reports on Form 10-K, quarterly reports on Form 10-Q, and other reports available on Valero’s website at www.valero.com. These risks could cause the actual results of Valero to differ materially from those contained in any forward-looking statement.

This presentation includes certain financial measures that are not defined under U.S. GAAP and are considered to be non-GAAP measures. Valero has defined these non-GAAP measures and believes they are useful to the external users of its financial statements, including industry analysts, investors, lenders, and rating agencies. Valero believes these measures are useful to assess its ongoing financial performance because, when reconciled to their most comparable U.S. GAAP measures, they provide improved comparability between periods after adjusting for certain items that Valero believes are not indicative of its core operating performance and that may obscure its underlying business results and trends. These non-GAAP measures should not be considered as alternatives to their most comparable U.S. GAAP measures nor should they be considered in isolation or as a substitute for an analysis of Valero’s results of operations as reported under U.S. GAAP. In addition, these non-GAAP measures may not be comparable to similarly titled measures used by other companies because Valero may define them differently, which diminishes their utility. Valero’s reconciliations of GAAP financial measures to non-GAAP financial measures are located at the end of this presentation.
GROWTH PROJECTS FOCUSED ON COST CONTROL, OPTIMIZATION AND MARGIN EXPANSION

EXECUTING A VIABLE PATH TO REDUCE AND OFFSET GREENHOUSE GAS EMISSIONS

HIGH RETURN PROJECTS WITH PRODUCTS PLACED INTO HIGH GROWTH, LOW CARBON MARKETS

CONTINUE TO DEVELOP ADDITIONAL LOW CARBON GROWTH OPPORTUNITIES

EVALUATING ECONOMIC PATHS TO FURTHER REDUCE CARBON INTENSITY

EVALUATING CARBON SEQUESTRATION

Best-in-class producer of fuels and products that are essential to modern life
Advancing the Future of Energy with Capital Discipline, Innovation and Unmatched Execution

Unmatched Execution with a Proven History of Operations Excellence

- Safe, reliable, environmentally responsible operations have driven higher profitability and lower volatility through multiple commodity cycles
- The lowest cash operating cost among peer group while maintaining first quartile operating performance
- Applying our liquid fuels manufacturing expertise to optimize our renewable diesel business

Growth Through Innovation

- Growth projects focused on operating cost control, market expansion and margin improvement
- Leveraging our global liquid fuels platform to expand our long-term competitive advantage with investments in economic low-carbon projects
- 25% after-tax IRR hurdle rate for projects

Earnings Growth

Demonstrated Commitment to Stockholders

- Disciplined capital allocation with solid free cash flow and returns to stockholders across margin cycles
- Delivered on our target payout ratio of 40% to 50% every year under current management
- 13% average Return on Invested Capital from 2014 to 2019

Capital Discipline

Comprehensive liquid fuels strategy driving economic growth projects and providing a viable path to reduce and offset GHG emissions by 63% by 2025

Steadfast in the execution of our strategy, pursuing excellence in operations, investing for earnings growth with lower volatility and honoring our commitment to stockholder returns.
Comprehensive Roadmap to Further Reduce Emissions with Projects in Execution

Targeting to **reduce** and **offset** Refining GHG emissions by **63%** through investments in **Board approved projects**, with the potential to achieve **72%** by 2025 with projects under consideration subject to Board approval.

**GHG Emissions Intensity Target (Scope 1 & 2)**

- **2011 Base Year (Scope 1 & 2)**: 35.8 Metric Tons CO₂e / Thousand BOE
- **2025 Target (Scope 1 & 2)**: 28.7 Metric Tons CO₂e

**Absolute Reductions and Offsets through Existing Board Approved Projects**

- **Refining GHG Emissions in 2011 (Scope 1 & 2)**: 31.8 Million Metric Tons CO₂e
- **Absolute Emissions Reduction through Efficiencies (Scope 1 & 2)**: 1.4 Million Metric Tons CO₂e
- **GHG Emissions Offset by Ethanol Production**: 4.7 Million Metric Tons CO₂e
- **GHG Emissions Offset by Renewable Diesel Production**: 5.9 Million Metric Tons CO₂e
- **GHG Emissions Offset by Global Credits for & Blending of Renewable Fuels**: 7.9 Million Metric Tons CO₂e
- **Refining GHG Emissions in 2025 after Reductions & Offsets (Scope 1 & 2)**: 11.9 Million Metric Tons CO₂e

See slides 22-23 for notes regarding this slide.
Expanding Our Long-term Competitive Advantage with Investments in Economic Low-carbon Transportation Fuels

Visibility to Earnings Growth

$1.2 to $1.6 billion in Annual EBITDA from Growth Projects

(expected completion / project cost)

Reinvesting capital with diversification into higher growth, higher return and lower carbon renewable fuels

Joint venture investments, including Diamond Green Diesel, reflect Valero’s ownership interest.

See slides 22-23 for notes regarding this slide. See slides 42-49 for non-GAAP disclosures.
Global Low-carbon Fuel Policies Driving Demand Growth for Renewable Diesel

**SIZE, SCALE AND GLOBAL REACH**

- High complexity coastal system with extensive connectivity to inland and imported crudes
- Operational flexibility to process a wide range of feedstocks
- Ratable wholesale supply of 1.2 million barrels per day or over 50% of our light products
- Global operations support optimization of product exports
  - One of the largest light products importers into Mexico

**LOWEST COST PRODUCER WHILE ACHIEVING TOP QUARTILE OPERATIONS**

- Safety and reliability are imperative for profitability
- Top quartile mechanical availability minimizes unplanned downtime and costs
- Access to cheap natural gas and a deep pool of skilled labor on the U.S. Gulf Coast

**INVESTMENTS IN EFFICIENCY, MARKET EXPANSION AND HIGHER MARGIN CAPTURE**

- Reducing cost and improving margin capture
  - Wilmington and Pembroke cogens
  - St. Charles and Port Arthur hydrocrackers
  - Port Arthur coker
  - Houston and St. Charles alkylation units
- Improving feedstock flexibility, cost and crude quality
  - Diamond, Sunrise and Red River pipelines
  - Connectivity in Corpus Christi
  - Line 9 into Quebec
  - Houston and Corpus Christi toppers
- Growing market share into higher netback markets
  - Central Texas pipelines and terminals
  - MVP Pasadena terminal
  - Expansion into Latin America with investments in Mexico and Peru

**PREMIER REFINING PORTFOLIO THAT IS RESILIENT EVEN IN A CARBON-CONSTRAINED SCENARIO**

**SIZE, SCALE AND GLOBAL REACH**

- Extensive connectivity and global optimization
- Lowest cost producer while achieving top quartile operations
- Disciplined investments growth with lower volatility

**Long-term, sustainable competitive advantage**

- Peer Range
- Free Cash Flow within Peer Group
- Highest Free Cash Flow 2012 – 2020

Peer group includes PSX, MPC, HFC, and PBF.
In 2020, we delivered our **best year ever on safety performance** and had the lowest number of environmental events in company history.

**Safety and Reliability are Imperative for Profitability**

Investments in reliability have contributed to operations excellence.

**In 2020, we delivered our best year ever on safety performance and had the lowest number of environmental events in company history.**

**Improvement Versus Industry Benchmarks Leads to Greater Margin Capture, Lower Operating Expenses and Better Efficiency**
Increased Refinery Availability Has Driven Valero to be the Lowest Cost Producer

Improvement in Mechanical Availability Versus Industry Benchmarks

Disciplined Capital Management is a Constant in Our Strategy

1. Maintain Strong Balance Sheet
   - Maintain investment grade credit rating
   - Target 20% to 30% debt-to-cap ratio

2. Non-Discretionary
   - **Sustaining Capex**
     - Target approximately $1.5 billion annually
     - Key to safe and reliable operations
   - **Dividend**
     - Commitment to stockholders
     - Targeting a sustainable and growing dividend with a payout that is at the high end of our peer group

3. Discretionary
   - **Growth Capex**
     - 25% after-tax IRR hurdle rate for projects
     - Refining projects focused on operating cost control, market expansion and margin improvement
     - Renewable fuels expansion
   - **Acquisitions**
     - Evaluate versus alternative uses of cash
   - **Buybacks**
     - Targeting an annual payout ratio between 40% and 50% of adjusted net cash provided by operating activities
     - Stock buyback program consists of ratable and opportunistic purchases

See slides 22-23 for notes regarding this slide.
Demonstrated Discipline in Capital Allocation

Steady investments to maintain a safe and reliable asset base and enhance the margin capability of our portfolio.

Almost 50% of growth capex is allocated to renewables.

Notes

**Payout Ratio**
Payout Ratio is the sum of dividends and stock buybacks divided by adjusted net cash provided by operating activities. Adjusted net cash provided by operating activities excludes changes in working capital and 50% of DGD’s operating cash flow (excluding the change in its working capital) attributable to our joint venture partner.

**Light Products**
Light products is the combined volume of gasoline and distillate. Gasoline volume includes blendstocks and distillate volume includes ULSD, jet fuel, kerosene, and ULSK.

**Slide 5**
Valero’s SASB Report aligns its performance data with the recommendations of the Sustainable Accounting Standards Board (SASB) framework in the Oil and Gas – Refining and Marketing industry standard. A copy of Valero’s SASB report and related disclosures can be found on Valero’s investor relations website at Investorvalero.com.

**Slide 6, Slide 9 and Slide 35**
Amounts shown represent targeted EBITDA growth. Valero is unable to provide a reconciliation of such forward-looking targets because certain information needed to make a reasonable forward-looking estimate is difficult to estimate and dependent on future events, which are uncertain or outside of its control, including with respect to unknown financing terms, project timing and costs, and other potential variables. Accordingly, a reconciliation is not available without unreasonable effort.

**Slide 10**
U.S. Light-Duty Vehicle Life Cycle Emissions study conducted by Argonne National Laboratory (DOE) – “Cradle-to-Grave Lifecycle Analysis of U.S. Light-Duty Vehicle-Fuel Pathways: A Greenhouse Gas Emissions and Economic Assessment of Current (2015) and Future (2025-2030) Technologies.” Study focused on the midsize sedan, assumed 15 year vehicle life of vehicle, renewable diesel emissions are based on 100% renewable diesel blend, electricity based on 2014 EIA average mix, no battery replacement for 210 mile range electric vehicle, DGD waste oil feedstock CI’s have at least 40% less emissions than soybean based renewable diesel.

U.S. Heavy-Duty Long-Haul Vehicle Life Cycle Emissions study conducted by Southwest Research Institute – “Class 8 Truck Life Cycle Analysis” (2020). Class 8 heavy-duty truck with a one-million mile (~15 years) lifetime; electric truck with a 500-mile battery range, electricity based on GREET Distributed U.S. Mix Variable 2020-2035, no battery replacement; 15L diesel engine running on 100% renewable diesel, renewable diesel carbon intensity based on CARB’s 2019 LCFS Quarterly Data Summary.

**Slide 11**
California LCFS credit values are for 2021, assuming $200 per metric ton carbon price. Renewable diesel peer reflects Neste Corporation.
Notes

Slide 13
Industry total recordable incident rate from U.S. Bureau of Labor Statistics. Valero TRIR includes employee and contractor data. Tier 1 three-year rolling averages of process safety events per 200,000 work hours. Tier 1 defined within API Recommended Practice 754. Industry benchmarking and Valero’s performance statistics from Solomon Associates and Valero.

Slide 14
Industry benchmarking and Valero’s performance statistics from Solomon Associates and Valero. Valero’s refining operations typically consume approximately 905,000 MMBtu/day of natural gas, of which 66% is operating expense and the balance is cost of goods sold.

Slide 16
Targeted debt-to-cap ratio based on total debt reduced by balance sheet cash. Peer group includes PSX, MPC, HFC, and PBF. Payout ratio is the sum of dividends and stock buybacks divided by adjusted net cash provided by operating activities. Adjusted net cash provided by operating activities excludes changes in working capital and 50% of DGD’s operating cash flow (excluding the change in its working capital) attributable to our joint venture partner.

Slide 19
Free cash flow is defined as net cash provided by operating activities less capital expenditures, deferred turnaround and catalyst cost expenditures, investments in joint ventures, and changes in current assets and liabilities. Average free cash flow reflects 2012 through the most recent annual filing. Average free cash flow for PBF reflects years 2013 to 2020 due to its December 2012 IPO. Volatility expressed as coefficient of variance, or the standard deviation divided by the mean, of the respective metric on a quarterly basis from the first quarter of 2012 through the most recent filing. EBITDA is defined as net income plus income tax, net interest and depreciation and amortization. Refining peer group includes PSX, MPC, HFC, and PBF. Oil majors include XOM, CVX, COP and EOG.

Slide 20
TSR from December 31, 2014 through February 24, 2021 includes stock price appreciation and dividends paid. EV / EBITDA based on 2022 consensus estimates.

Slide 28
Ranges represent average quarterly minimums and maximums of each feedstock category as a % of total feedstock. Ranges for monthly averages are wider.

Slide 30
VLO U.S. product exports reflect Valero’s actual U.S. gasoline and distillate export volumes. Distillate volume includes diesel, jet fuel and ULSK. Map shows destinations for products exported from Valero’s refineries in the U.S., Canada and the U.K.
VLO Guidance

1Q21

• Throughput (MBPD)
  – U.S. Gulf Coast 1,490 to 1,540
  – U.S. Mid-Continent 410 to 430
  – North Atlantic 245 to 265
  – U.S. West Coast 170 to 190

• Refining cash operating expense per barrel of throughput $4.75

• Ethanol
  – Production (millions of gallons per day) 3.7
  – Operating expense per gallon of production
    • Cash opex $0.39
    • Non-cash opex $0.06

• Depreciation and amortization expense ($MM) $575

• Net interest expense ($MM) $155

Full-Year 2021

• Renewable Diesel
  – Sales volume (thousands of gallons per day) 790
  – Operating expense per gallon of production
    • Cash opex $0.50
    • Non-cash opex $0.15

• Payout ratio(2) of adjusted net cash provided by operating activities 40 to 50%

• General and administrative expense ($MM) $850

• Annual capital expenditures ($MM)
  – Sustaining $2,000
  – Growth 60%
  – Growth 40%

(1) Unless otherwise stated, guidance as provided on the 4Q20 earnings call and is included here for informational purposes only.

(2) Payout ratio is the sum of dividends and stock buybacks divided by adjusted net cash provided by operating activities. Adjusted net cash provided by operating activities excludes changes in working capital and 50% of DGD’s operating cash flow (excluding the change in its working capital) attributable to our joint venture partner.
We are Committed to Protecting the Environment

**Reduction of GHG Emissions**
- Targeting to reduce and offset 63% of global refining GHG emissions by 2025
- Cogeneration systems offset enough to power more than 400,000 homes

**Recycling, Reusing, Reclaiming, and Reducing**
- In 2019, we recycled more than 17 times the amount of fresh water consumed in refining operations
- 50 megawatt wind farm avoided ~830,000 metric tons of carbon dioxide emissions since 2009

**Carbon Capture**
- Our Port Arthur refinery became the first industrial site in the U.S. to host a large scale carbon capture project, with more than one million metric tons captured each year

**Renewables**
- Renewable Diesel and Ethanol reduce life cycle GHG emissions up to 80% and 30%, respectively, which along with blending and credits offset more than 10 million metric tons of GHG emissions in 2019
- Diamond Green Diesel processes recycled animal fats, used cooking oil, and inedible corn oil to produce a low carbon intensity renewable diesel

**Environmental Management Systems**
- A proprietary systematic approach, Commitment To Excellence Management System (CTEMS), adheres to a “plan-do-check-act” model to achieve excellence, driving safe, reliable and predictable operations, while minimizing impacts on communities and the environment

- Assessing the feasibility of carbon capture at our Ethanol plants that may provide an economic path to further reduce carbon intensity of our Ethanol production

- Our Fuels Compliance and Environmental Excellence and Risk Assessment programs assure focus on product quality and going beyond regulations

---

1. 100% used cooking oil feedstock results in a carbon intensity score of 20 under California’s LCFS program.
Sharing Our Success with the Communities where we Operate with Strong Governance and Ethical Standards

**SOCIAL**

- **Diversity and Inclusion**
  - 35% of our U.S. workforce are minorities
  - 29% of our professional employees are women

- **Community Investments**
  - Surpassed $58 million in 2020, with more than $12 million for COVID-19-related support distributed as follows:
    - Basic Needs: 52%
    - Education: 33%
    - Health Care: 15%

- **Community Engagement**
  - Valero has been named to The Civic 50 most community minded list each year since 2013

**GOVERNANCE**

- **Board of Directors**
  - 5 of 11 directors represent diversity of race or gender
  - 3 of 11 are women

- **Stakeholder Engagement**

- **All-Employee Bonus**
  - 40% Financial
  - 40% Operational
  - 20% Strategic

- Board and Committee oversight of risks and compliance, including climate change risks
Strong Presence in Advantaged U.S. Gulf Coast and Mid-Continent

Crude Supply Advantage in the Gulf Coast and Mid-Continent

Valero's refineries have operational flexibility to process a wide range of feedstocks and access to a deep pool of skilled labor in the U.S. Gulf Coast.
Operational Flexibility and Refinery Optimization Provide Competitive Advantage

- Our operational flexibility and optimization to quickly shift light product yields as market conditions signal move from “max gasoline” to “max distillate” enables higher margin capture.

- Demand impacts from COVID-19 drove yields to swing between both extremes within a few months.

- VLO has demonstrated a wider range of yields for gasoline, kerosene, jet fuel, and diesel versus the industry.

Source: Monthly industry refinery yields from EIA through November 2020.
Competitive Global Light Products Supply

Product shortages in Latin America, Eastern Canada, Europe, and Africa expected to drive U.S. export demand growth.

- Gasoline
- Distillate

See slides 22-23 for notes regarding this slide.
Investing to Grow Product Exports into Higher Netback Markets

Advantaged Refineries and Logistics

U.S. Product Exports
(12-month moving average, mbpd)

Expansion of supply chain to high demand growth markets provides a ratable product outlet and improves margin capture.
**Ratable Global Wholesale Supply Through an Extensive Marketing Network**

(1) U.S. volumes exclude jet rack sales.
(2) Europe volumes include jet fuel. Canada volumes include jet fuel and some bulk sales.
(3) Latin America volumes include Mexico and Peru volumes. Mexico volumes include delivered rail sales. Peru volumes include jet fuel and bulk sales.

1.2 million barrels per day of ratable wholesale supply

>50% of our light products production

7,000 outlets carry our brand names

**Valero Mexico Volume Growth**

(mbpd)

Valero is one of the largest light products importers into Mexico

**Mexico Growth Projects**

(contractured storage capacity, mbbls)

- Aguascalientes: 140
- Monterrey: 325
- Guadalajara: 505
- Puebla: 640
- Veracruz: 2,100
- Altamira: 1,100
- Mexico City: 640

**Stable branded and unbranded demand**

Rack blending generates RINs, partially offsetting our RVO compliance costs

**Mexico wholesale business supported by a growing, flexible logistics supply system**

Valero Mexico Volume Growth

Early Operations

- Currently selling product in Puebla, Monterrey and Guadalajara via rail-to-truck transloading.
Valero’s Logistics Assets

- Over 130 million barrels of active shell capacity for crude oil and products
- Over 200 truck rack bays
- Pasadena terminal completed in 2020

- Over 3,000 miles of active pipelines
- Diamond Pipeline expansion to be operational in 2021
- Central Texas Pipeline started up in 2019
- Sunrise Pipeline expansion started up in 2018

- Approximately 5,200 railcars
- Expected to serve long-term needs of ethanol, asphalt, aromatics, and other products

- Over 50 docks
- Two Panamax class vessels (joint venture)

---

(1) Includes assets that have other joint venture or minority interests. Does not include ethanol assets.
• 13 plants with 1.7 billion gallons annual production capacity
  – Dry mill production process, where corn is ground into flour and mixed with water before fermentation
  – Efficient plants with scale, located in the corn belt
  – Operational best practices transferred from refining
• Cost advantaged versus the industry

**Ethanol**

**U.S. Fuel Ethanol Exports**

• Ultimately, global renewable fuel mandates should drive export growth
  – U.S. corn-based ethanol is the most economic choice for export into global markets
  – Existing logistics assets well-positioned to support export growth
  – Expect to see incremental demand as a result of fuel efficiency standards and year-round E-15 sales in the U.S.
• Evaluating carbon sequestration projects
  – 45Q Tax Credit provides economic incentive
  – LCFS value for the lower carbon intensity ethanol

Investing to Improve Margins and Light Product Yields

Port Arthur Coker

- $975 MM anticipated cost for 55 MBPD delayed coker and sulfur recovery unit, with expected startup in 2023
- Creates two independent CDU-VDU-coker trains, which should improve turnaround efficiency and reduce maintenance-related lost margin opportunity
- Design enables full utilization of existing CDU capacity, reduces VGO purchases, and increases heavy sour crude and resid processing capability and light products yield
- Estimated $420 MM annual EBITDA contribution at 2018 average prices ($325 MM at mid-cycle prices)

### Incremental Volumes (MBPD)

Investing to Upgrade Product Value

Houston and St. Charles Alkylation Units

- **Octane demand expected to grow** due to Tier 3 sulfur regulations and CAFE standards
- Abundant, low cost North American NGL supply provides advantage for Gulf Coast capacity additions
- Both units **upgrade low value isobutane and amylenes into high value alkylate**
  - High octane, low vapor pressure component enables the blending of incremental butane and low octane naphtha

**Capacity at Houston** refinery started up in June 2019
- 13 MBPD

**Capacity at St. Charles** refinery started up in the fourth quarter of 2020
- 17 MBPD
Investing to Improve Access to North American Crude and Lower Refinery Operating Cost Structure

GROWTH PROJECTS FOCUSED ON OPTIMIZATION AND MARGIN CAPTURE

Completed Diamond Pipeline project with 200 MBPD capacity connecting Memphis to Cushing, and Sunrise Pipeline 100 MBPD undivided interest connecting Midland to Wichita Falls

- Completed Diamond Pipeline project with 200 MBPD capacity connecting Memphis to Cushing, and Sunrise Pipeline 100 MBPD undivided interest connecting Midland to Wichita Falls
- Provides additional Mid-Continent crude access to our McKee, Ardmore and Memphis refineries
- Improves crude oil supply flexibility, efficiency and blend quality

Red River Pipeline 74 MBPD undivided interest connecting Ardmore to Cushing

- Provides additional Mid-Continent crude flexibility to the Ardmore refinery
- Reversal and extension expected in service in 2021

Growth Projects Focused on Cost Control and Margin Expansion

- Navigator Glass Mountain Pipeline Connection with 45 MBPD capacity connecting McKee to Cushing
  - Provides Mid-Continent crude flexibility and security of supply to the McKee refinery
  - Expected to improve supply reliability for power and steam

Wilmington cogeneration unit started up in November 2017

- Pembroke cogeneration unit (£130 MM or $170 MM cost) scheduled to be completed in 2021
- Expect to reduce costs and improve supply reliability for power and steam

\(1\) Project cost for Valero’s 50% share of Diamond.
Investing to Supply Higher Demand Markets and Expand Product Export and Biofuels Blending Capabilities

Central Texas pipelines and terminals to supply high-growth refined products market

- Started up in September 2019
- Approximately 205 miles of pipe\(^{(1)}\), 960 thousand barrels of total storage capacity, and a truck rack

Pasadena refined products terminal joint venture with Magellan Midstream Partners, L.P.

- Completed in the first quarter of 2020 at a cost of approximately $410 MM
- 5 MM barrels of storage capacity with butane blending, two ship docks and a three-bay truck rack

Projects expected to improve product margins, reduce secondary costs, provide opportunity for third-party revenues, and increase capability for biofuels blending

\(^{(1)}\) Valero owns ~70 mile pipeline from Hearne to Williamson County and 40% undivided interest in 135 mile pipeline from Houston to Hearne.

---

[2] Represents the combined capacities of two refineries—Corpus Christi East and Corpus Christi West.
Now vs. Then – A Shift In Valuation

**In the Past**

**INDUSTRY/MACRO**
- Majority of the U.S. refining capacity operated by large integrated oil companies
- Range bound industry wide EV/EBITDA multiple +/- 4.5x
- Peer group fragmented with smaller scale, less efficient refiners
- U.S. importing crude and products to meet domestic shortage
- Higher interest rates (10-yr Treasury ~5%)
- Marginal operations
  - Third quartile operating performance impacted by M&A integration
  - Disadvantaged East Coast and Caribbean operations
  - Less disciplined M&A and capital project execution
  - Frequent acquisitions
  - Focused on volume growth
  - Approximately $3.5 billion annual capex
- Volatile cash flow profile and lower stockholder returns
  - 1% to 2% dividend yield ($0.32/share annually)
  - Approximately $5 billion of liquidity
  - >570 million shares outstanding
  - Volatile stock price

**New Paradigm**

**INDUSTRY/MACRO**
- Majority of the U.S. refining capacity operated by independent refiners
- EV/EBITDA multiple expansion and dispersion by company
- Peer group of larger scale, efficient and complex refiners
- Abundant supply of domestic crude oil and natural gas providing feedstock advantage
  - U.S. exporting products to higher growth markets
  - Lower interest rates (10-yr Treasury <2%)
- Expanding our long-term competitive advantage with investments in economic low-carbon projects
  - First quartile operating performance amid stable, upgraded portfolio with the lowest cash operating expense
  - Advantaged operations and scale
- Disciplined capital investment and growth strategy
  - Rigorous M&A targeting and screening process
  - 25% after-tax IRR hurdle rate for projects focused on operating cost reduction, margin enhancement and market expansion. $2.0 to $2.5 billion annual capex.
- Distinctive free cash flow and higher stockholder returns
  - Annualized dividend of $3.92/share
  - $9.0 billion of liquidity as of December 31, 2020
  - Approximately 409 million shares outstanding as of February 2021
  - Lower volatility in earnings and free cash flow
Electric Vehicle (EV) Myth: Zero Emissions

Myth: Zero Emissions

Fact: Significant Emissions from EV Life Cycle

- Life cycle of emissions from EVs is significant – from mining raw materials to fabrication to delivery to the showroom
  - 2 times as much CO₂ emissions are generated compared to cars fueled by gasoline
  - Before it leaves the showroom, 12 tons of CO₂ emissions have already been generated vs. 6 tons of CO₂ emissions from cars fueled by gasoline
- 25 tons of CO₂ emissions are needed to make an EV that can drive similar range as a car fueled by gasoline
- “The problem is that batteries are big and heavy. The more weight you’re trying to move, the more batteries you need to power the vehicle. But the more batteries you use, the more weight you add—and the more power you need. Even with big breakthroughs in battery technology, electric vehicles will probably never be a practical solution for things like 18-wheelers, cargo ships, and passenger jets. Electricity works when you need to cover short distances, but we need a different solution for heavy, long-haul vehicles” – GatesNotes
- Southwest Research Institute Ted Talk, presented by Graham Conway

Before it leaves the showroom, an EV emits twice the CO₂ emissions compared to a car fueled by gasoline
Non-GAAP Disclosures

Return on Invested Capital (ROIC)
VLO defines return on invested capital (ROIC) as adjusted net income attributable to VLO before adjusted net interest expense after-tax divided by average invested capital. VLO defines adjusted net income attributable to VLO as net income attributable to VLO stockholders adjusted to reflect the after-tax effect of special items that VLO believes are not indicative of its core operating performance and that may obscure VLO’s underlying business results and trends. VLO defines adjusted net interest expense as “interest and debt expense, net of capitalized interest” adjusted to exclude “interest and debt expense, net of capitalized interest” attributable to non-controlling interests. The income tax effect of adjusted net interest expense is estimated based on the U.S. statutory income tax rate for the respective annual period. Average invested capital is defined as the average of total invested capital for the current annual period and total invested capital for the prior annual period. VLO defines total invested capital as debt attributable to VLO plus VLO stockholders’ equity less cash and cash equivalents. Debt attributable to VLO is defined as the current portion of debt and finance lease obligations, plus “debt and finance lease obligations, less current portion”, less debt attributable to non-controlling interests. Debt attributable to VLO for the year ended December 31, 2014 includes an adjustment to reflect the retrospective adoption of ASU No. 2015-15 subtopic 835-30, which resulted in the reclassification of certain debt issuance costs from “deferred charges and other assets, net” to “debt and finance lease obligations, less current portion.”

Adjusted EBITDA
VLO defines EBITDA as net income (loss) before depreciation and amortization expense, “interest and debt expense, net of capitalized interest”, income tax expense (benefit), and income (loss) from discontinued operations. VLO defines adjusted EBITDA as EBITDA further adjusted to reflect the effect of special items that VLO believes are not indicative of its core operating performance and that may obscure VLO’s underlying business results and trends. VLO believes that the presentation of adjusted EBITDA provides useful information to investors to assess its ongoing financial performance because when reconciled to net income, it provides improved comparability between periods. The U.S. generally accepted accounting principles (GAAP) measures most directly comparable to adjusted EBITDA are net income and net cash provided by operating activities.

Renewable Diesel Net Cumulative Cash Flow
VLO defines renewable diesel net cumulative cash flow as DGD’s cumulative adjusted EBITDA attributable to VLO, less DGD’s cumulative capital expenditures attributable to VLO. VLO defines DGD’s adjusted EBITDA attributable to VLO as fifty percent (VLO’s ownership interest) of DGD’s operating income (loss) plus depreciation and amortization expense, and adjusted for 2017-2019 blender’s tax credit (BTC). VLO defines DGD’s capital expenditures attributable to VLO as fifty percent (VLO’s ownership interest) of DGD’s capital investments. Because DGD’s net cash flow is effectively attributable to each partner, only 50 percent of DGD’s EBITDA and capital expenditures should be attributed to VLO’s renewable diesel cash flow. Therefore, renewable diesel cash flow has been adjusted for the portion of DGD’s EBITDA and capital expenditures attributable to VLO’s joint venture partner’s ownership interest because VLO believes that it more accurately reflects cash flow generated by its renewable diesel segment.
Non-GAAP Disclosures

Renewable Diesel Adjusted EBITDA
Renewable diesel adjusted EBITDA is defined as DGD’s operating income adjusted to reflect the blender’s tax credit and excluding depreciation and amortization expense. Operating income is adjusted to reflect the blender’s tax credit in the proper period. The blender’s tax benefit recognized in 2019 is attributable to volumes blended during 2019 and 2018 and was recognized in December 2019 because the U.S legislation authorizing the credit was passed and signed into law in that month. The benefit recognized in 2018 is attributable to volumes blended during 2017 and was recognized in February 2018 because the U.S. legislation authorizing the credit was passed and signed into law in that month. VLO believes adjusting for these items provides improved comparability between periods. Renewable diesel EBITDA per gallon is renewable diesel adjusted EBITDA divided by DGD’s renewable diesel sales volume for the period. Sales volumes are calculated by multiplying sales volumes per day by the number of days in the applicable period.

Free Cash Flow
VLO defines free cash flow as net cash provided by operating activities less capital expenditures, deferred turnaround and catalyst cost expenditures, investments in joint ventures, and changes in current assets and liabilities. VLO believes that the presentation of free cash flow provides useful information to investors in assessing VLO’s ability to cover ongoing costs and VLO’s ability to generate cash returns to stockholders. The GAAP measures most directly comparable to free cash flow are net cash provided by operating activities and net cash used in investing activities.

Adjusted Net Cash Provided by Operating Activities
Defined as net cash provided by (used in) operating activities excluding the items noted below. VLO believes adjusted net cash provided by operating activities is an important measure of its ongoing financial performance to better assess its ability to generate cash to fund VLO’s investing and financing activities. The basis for VLO’s belief with respect to each excluded item is provided below.

- Changes in current assets and current liabilities – Current assets net of current liabilities represents VLO’s operating liquidity. VLO believes that the change in its operating liquidity from period to period does not represent cash generated by VLO’s operations that is available to fund VLO’s investing and financing activities.
- DGD’s adjusted net cash provided by operating activities attributable to VLO’s joint venture partner’s ownership interest in DGD – VLO is a 50/50 joint venture partner in DGD and consolidate DGD’s financial statements; as a result, all of DGD’s net cash provided by operating activities (or operating cash flow) is included in VLO’s consolidated net cash provided by operating activities.
- DGD’s partners use DGD’s operating cash flow (excluding changes in its current assets and current liabilities) to fund its capital investments rather than distribute all of that cash to themselves. Nevertheless, DGD’s operating cash flow is effectively attributable to each partner and only 50 percent of DGD’s operating cash flow should be attributed to VLO’s net cash provided by operating activities. Therefore, net cash provided by operating activities has been adjusted for the portion of DGD’s operating cash flow attributable to VLO’s joint venture partner’s ownership interest because VLO believes that it more accurately reflects the operating cash flow available to VLO to fund VLO’s investing and financing activities.
